🌐 Multi-Cloud & Linux
Infrastructure

DevOps & Systems Engineer with strong expertise across Linux server administration, multi-cloud platforms (GCP, Azure, AWS), container orchestration (Kubernetes, Docker, ArgoCD), and automated CI/CD pipelines (GitHub Actions, Jenkins). Proven background in executing legacy server migrations to modern Ubuntu instances, deploying high-availability database clusters (PostgreSQL, MariaDB, CloudNativePG), and implementing full-stack observability with Prometheus, Grafana, and ELK.

🔧 TECHNICAL SKILLS MATRIX

PROFESSIONAL EXPERIENCE

DevOps Engineer • [Vizzn Inc \(Canada\)](#)

Aug 2023 – Feb 2025

- Migrated core Borger application services from legacy servers to modern Ubuntu infrastructure, substantially upgrading throughput, server security posture, and runtime dependencies.
- Led Dgraph distributed graph database migration and cluster upgrades, guaranteeing seamless schema evolution and zero downtime.
- Administered GCP monitoring and logging suites, configuring custom telemetry dashboards and real-time incident alerting.
- Analyzed and documented Google Cloud Pub/Sub topics and subscription routing to ensure high message delivery throughput.
- Executed compliance validation and automated testing for DRATA, maintaining continuous audit readiness.
- Optimized GitHub Actions CI/CD workflows, cutting execution runtimes and deprecating legacy action triggers.

DevOps Engineer • [Technonies](#)

Mar 2022 – Oct 2024

- Implemented GitOps continuous deployment workflows using ArgoCD for automated Kubernetes cluster synchronization.
- Architected high-availability database clusters: PostgreSQL with Patroni & pgpool, and MariaDB Galera clusters with MaxScale.
- Managed Kubernetes database operators (Postgres-Operator, MariaDB-Operator) and spearheaded migration to CloudNativePG.
- Deployed full-stack Kubernetes and bare-metal monitoring solutions utilizing Prometheus, Grafana, Node Exporter, and cAdvisor.
- Developed modular Ansible playbooks for automated Kubernetes bootstrap, host hardening, and observability rollouts.
- Provisioned critical enterprise services including FreeIPA identity management, Dovecot/Postfix secure mail servers, Frappe ERPNext, and Zulip team servers.
- Configured high-availability Vicidial call center cluster integrated with Asterisk VOIP routing.

DevOps Engineer • [THINK Surgical \(USA\)](#)

Feb 2023 – Dec 2023

- Provisioned and managed enterprise JupyterHub environments on Ubuntu infrastructure for data science and engineering workflows.
- Automated system provisioning and agent management using Ansible and Wolf Arctic Agent.
- Authored Software Validation Protocols (SVP) and Software Verification Reports (SVR) adhering to medical compliance standards.
- Executed end-to-end TeamCity CI server migration, ensuring continuous pipeline availability.

DevOps Engineer • Code Informatics

Feb 2021 – May 2022

- Designed and implemented DevOps roadmap and automated CI/CD delivery pipelines for engineering teams.
- Architected and deployed enterprise application infrastructure on Microsoft Azure.
- Built automated Jenkins pipelines integrating Gradle and Grunt build automation tools for WAR/ZIP artifacts.
- Standardized containerized application environments across development and production using Docker.
- Implemented Elasticsearch, Logstash, and Kibana (ELK) stack for centralized real-time logging and analytics.

Linux System Engineer • Cloudways

Feb 2019 – Jan 2021

- Maintained and administered large-scale multi-tenant Linux hosting infrastructure across Ubuntu and CentOS platforms.
- Managed package upgrades, security patches, system troubleshooting, and performance tuning for production web servers.
- Monitored system resources and health metrics to ensure high uptime and service availability.
- Automated recurring server maintenance tasks, log rotation, and diagnostic routines using Bash scripting.

EDUCATION & ACADEMIC RESEARCH

BS in Software Engineering

2017 – 2021

COMSATS Institute of Information Technology (2017 – 2021)

- **Final Year Project:** Dual-Axis Solar Tracking System optimizing solar panel output alignment.
- **Academic Thesis:** Hypothesis-driven statistical research study conducted for BZU University.
